Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claim 1, and 6-15, are drawn to a plurality of multi-value memory cells, classified in class 711, subclass 101.
 - II. Claims 2 and 3, drawn to lot selection, classified in class 463, subclass 16.
 - III. Claims 5, 16 and 17, are drawn to determining object orientation, classified in class 342, subclass 56.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II and III are related as combination (I) and subcombinations (II & III). Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because invention I discloses a gaming apparatus comprising multi-value memory cells and a detecting means for detecting a position means. Invention II discloses the particulars of a game apparatus and invention III discloses the particulars of detecting position. The subcombinations have separate utility such as a qualification system in case of invention II and the method of orientation using induced current could be used in shipping in case of invention III.

Art Unit: 3714

3. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, inventions II and III have separate utility such as shown above. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
